

PlanterSpeakers

by Madison Fielding

Welcome to the world of high fidelity outdoor sound

PlanterSpeakers by Madison Fielding began in 1999 as a custom installation project when one of our clients in the Northeast asked me to find the best speakers available for outdoor use. I had an A/V installation business and was using bracket speakers for my outdoor jobs. The problem with this install was that there was no place to mount speakers on the house, or room for rock speakers in the flower beds. Even if there were, the products available would only deliver okay sound, at best.

We had specified and installed beautiful speakers, subwoofers and great quality amps inside the house and the customer wanted the same quality sound outside. We needed a different solution. I looked around the patio and made a few suggestions, but nothing seemed right. Then, I spotted a good sized planter in the corner of the patio and the light bulb went on. PlanterSpeakers! I went back to the shop and went to work. And, there was a lot of work to do; I considered sound quality, planting space, and drainage, not to mention environmental issues.

I had grown up in my dad's audio store and, as a musician and avid music listener, was used to hearing some of the finest speakers and equipment. I knew that I wanted to make the best outdoor speaker possible: down firing ten-inch woofers, four-inch midranges, one-inch soft dome tweeters—this would be impressive. And you could plant in them! It was a true hybrid product.

We installed the first four Flagstone speakers on that job. And, when we turned them on, it sounded like there was a symphony orchestra in the backyard. 15 years later, they still sound exactly the same, and are truly loved. The Piermont is our newest planter speaker. It's gotten rave reviews from the press, from outdoor pool, patio and garden designers, and from their music loving clients.

To this day, we use only the highest quality materials and construction techniques, creating the best sounding products that will last in all kinds of weather. Over the years, we've enhanced the performance of our speakers and added new architectural styles. The best part about our outdoor speakers is that they're hidden in planters making them virtually invisible, and they sound fantastic.

Now, there are PlanterSpeakers for every personal taste and budget. Our Flagstone, Piermont, and Westport planters feature three-way speakers, all available in custom configurations. Our subwoofer PlanterSpeakers can be added for extra-deep bass as well.

Experience the true feeling of luxury in your own backyard. Our speakers will make you and your plants happy!

Art Powers Jr.

Piermont

Our latest planter speaker is The Piermont. Made with reforested slatted teak, the Piermont offers stunning yet subtle luxury. Available in three sizes and multiple speaker configurations, this three-way speaker produces deep bass, flowing vocals and transparent highs. And, like all PlanterSpeakers, the Piermont's sound seems to emanate from thin air - invisible to the eye and music to your ears.

Lattice

While our classic lattice-work planter is made of cypress wood and comes only

in one size, it is available with different speaker configurations. The Westport is built to last with hearty construction techniques and includes our Smart Pot® interior for great drainage. It looks great in its natural finish and features extraordinary PlanterSpeakers sound.

Terra Cotta

This classic, double rolled, rim planter is a perfect choice for patios and terraces, and is great for draping plants in close proximity to entertaining areas. The pot is made of durable U/V rated polyethylene from custom molds imported from Italy in a clay or granite finish. The Terra Cotta features Smart Pot® drainage technology. It houses either a five, six, or eight-inch high-power coaxial driver that fires into our patented reflector wrought iron stand. The Terra Cotta series PlanterSpeakers sound great, are completely invisible, and will truly enhance your outdoor living experience.

Flagstone

The Flagstone is a timeless design with contemporary yet classic style. Its three-way speaker design hides a 10-inch woofer, a four-inch mid-range and one-inch tweeter in a planter that will change the way you listen to music outside. This speaker rocks, with solid bass, punchy vocals and crystalline highs. The Flagstone is available in two sizes, multiple speaker configurations, and in four colors, blending graciously into any outdoor environment.

Sedona

The Sedona sports a modern and compact design and is offered in multiple colors. Whether placed indoors or out, the Sedona packs a nice punch with a high impact 5.25" driver, making it the perfect choice for smaller spaces. The Sedona also comes with a custom Smart Pot® planter insert for great drainage.

All of our products are made in the U.S. using the finest speakers, materials and hardware available. Each comes with a five-year warranty.

Our PlanterSpeakers are durable, made in the northeastern U.S., are sealed against rain, cold, snow, and wind, and are treated with a 10-year UV protection to guard against hot sun.

PlanterSpeakers feature a custom-designed, soft, removable and breathable planter bag from Smart Pot®. Your plants will love the sound, and the drainage!

Piermont Planter Speaker

SPECIFICATIONS	Piermont 17	Piermont 21	Piermont 21s
