

Madison Fielding is proud to present the world's first environmentally friendly outdoor speakers. These lattice work planter speakers look great on decks, patios or around the pool. Made from five year renewable Maine White Cedar and handcrafted in the United States, our wood speakers and benches show that you can design and build great products while conserving our natural resources. In addition to the environmental benefits, the use of real wood benefits the sound of the speaker. Both models are available in 90 or 180 degree versions or as a full stereo speaker.

## The Westport PlanterSpeaker
